

<b><u>Chapter 3 Gravitation and Relativity Physics</u></b>		
Progress in Developing a Superconducting Microwave Oscillator for Precision Measurements on Orbit	J. Nissen, J. A. Lipa, S. Wang, D. Avaloff, D. A. Stricker, S. Bachman, and Y. C. Lin Stanford University	3-2
Space-based Searches for Lorentz and CPT Violation	Neil Russell Northern Michigan University	3-7
Precision Studies of Relativity in Electrodynamics	Matthew Mewes Indiana University	3-16
STEP Technology Status (abstract)	Glen Sapilewski Stanford University	3-31
Short-range Inverse Square Law Experiment in Space	Ho Jung Paik and M. Vol Moody University of Maryland Don Strayer JPL, Caltech	3-33
Test of the Equivalence Principle in an Einstein Elevator: highlights of the first-year progress report	I. Shapiro, E. C. Lorenzini, P. Cheimets, M. L. Cosmo Harvard-Smithsonian Center for Astrophysics S. Glashow Boston University V. Iafolla Institute of Space Science (Rome) C. Bombardelli University of Padova & CfA visiting student A. Turner Harvard University	3-45
Implications of an Accurate Measurement by a SEE Mission of the Rate of Change of the Gravitational Constant	A. J. Sanders University of Tennessee & ORNL A. D. Alexeev, K. A. Bronnikov, V. D. Ivashchuk, N. I. Kolosnitsyn, M. Yu. Konstantinov, V. N. Melnikov Russian Gravitational Society L. L. Smalley University of Alabama	3-63
Tests of CPT and Lorentz Symmetry using Hydrogen and Noble-gas Masers	Ronald L. Walsworth Harvard-Smithsonian Center for Astrophysics	3-70
Optical Clocks for Space	Leo Hollberg, Jim Berquist, and Chris Oates NIST-Boulder	3-82
Spin-Mass Interaction Low-Temperature Experiment on ISS	Ho Jung Paik and M. Vol Moody University of Maryland Donald M. Strayer JPL, Caltech	3-92
